

## **Confounders**

### **Baseline**

- \* Baseline confounders should ideally be at time 0

1. Remove full code on discharge (because it is in the future)

2. Consider removing white ethnicity as a confounder

3. From hypertension present to connective tissue disease, consider removing because they're used to calculate Charlson morbidity score

- \* Remove all nodes except for age into cci

- \* Change sepsis severity with sofa

- \* Sum up: Charlson, sofa, basic labs, basic vitals
